THINK BEFORE YOU CLICK. YOU CAN DO IT!

TIP NO. 1 BE CRITICAL OF INCOMING EMAILS.

Today, hackers can send you emails that mimic the ones you get from colleagues. This is tricky and calls for you to start mistrusting the emails you receive – and your ability to figure out what's right and what's wrong.

Actually, it's quite simple: Are you in doubt? Then don't click.

DON'T LISTEN TO THEM. RECYCLING SUCKS.

TIP NO. 2

A STRONG PASSWORD IS LONG AND UNIQUE.

A short password is a bad password. And if you reuse it across different accounts, it's really bad. Simple as that. You see, there is a reason you don't use the same key for your home, your car and your workplace.

HAVING SECRETS IS OKAY. ESPECIALLY FROM CONNMEN!

TIP NO 3 KEEP SENSITIVE INFORMATION TO YOURSELF

Never type in sensitive information about you or your company online. Why? Because your sensitive information can be exploited in the hands of a hacker – and it's highly unlikely that, let's say, sales reps or suppliers need this information.
